Digital control of four AC outlets/devices per Power/Con unit

Power/Con module with GameWorks Controller

Control signals to Power/Con can come from:

• Low voltage switches   • Personal Computer   • GameWorks Controller

When combined with GameWorks™, up to four Power/Con modules can be deployed, enabling control of up to 16 independent channels/devices.

GameWorks™ can be programmed to receive input from users, then send commands over data cables to turn on or off any device, combination of devices or sequences.

FEATURES:

• Plug in up to four electrical devices (500 watts per device)
• Isolated low voltage control (no shock hazard)
• Reliable solid state electronics
